AI Search Vocabulary & Metrics [Very Important]

Let's understand what we're actually looking at when we track AI search.

Here's a typical ChatGPT interface with the key components labeled:

Orange box (Prompt): The question a user types - "what are the best project management tools".

Red box (Answer): The AI-generated answer listing tools like Asana and Trello.

AI Search Vocabulary & Metrics [Very Important]

Yellow highlight (Mention): Where brands get mentioned within the answer.

Green box (Citations): The sources AI references, sometimes with clickable links. These are of 2 kinds - ones shown on the "Citations" side panel as well those shown in-line in the answer itself.

Core Terms: From SEO to AI Search

Traditional SEO has keywords, rankings, and SERPs. AI search has its own vocabulary. Let's translate what these terms mean and why they matter for your strategy.

SEO Term	AI Search Term	What It Actually Means
Keyword	Prompt	The conversational questions users type into AI platforms. Instead of "CRM software," think "what CRM should I use for my 10-person startup?"
SERP	Answer	The synthesized answer AI creates from multiple sources. Not a list of links, but a complete answer.
Ranking Position	Mention Position	Where you appear within the AI's answer - 1st paragraph, 2nd, or buried at the end.
Organic Traffic	AI Visibility	How often your brand appears across all AI answers. Measured as a percentage, not visits.
Backlinks	Citations	When AI references your content as a source. May include a link, or just mention your brand.
Click-Through Rate	Citation Click Rate	How often users click on your citations when provided. Usually much lower than traditional CTR.
Domain Authority	Citation Authority	How trustworthy AI considers your domain based on who else cites you.

Additional AI Search Terms

Answers Mentioned
The total count of AI answers where your brand appears. Different from visibility percentage - this is the raw number.

Answer Variations
When the same prompt gives different answers across platforms or time. Normal volatility can be 30%+ daily.

Query Fan-Out (Google AI only)
When one search becomes 20+ sub-queries behind the scenes.

Mention Sentiment
Whether AI describes your brand positively, negatively, or neutrally in its answer.

Source Type
Classification of citing domains:

- Your brand (your own website's pages)
- Competitor (direct competitor sites)
- Third party (independent sources)

Citation Gap
Website sources that mention your competitors but not you - your biggest opportunity.

Key AI Search Metrics Explained

Now let's understand the numbers that actually matter in AI search.

Visibility Score

Brand Presence

Visibility ⓘ

57%

Responses Mentioned ⓘ

354

Sentiment ⓘ

82

What it measures: The percentage of tracked answers where your brand appears.

How it's calculated:

- Answers where you're mentioned ÷ Total answers tracked x 100
- Example: Mentioned in 57 out of 100 answers = 57% visibility

What good looks like:

- 🟢 **Excellent:** Above 70%
- 🟡 **Good:** 40-70%
- 🔴 **Needs work:** Below 30%

Why it matters: If you're not mentioned, you don't exist in AI search. This is your most fundamental metric.

Answers Mentioned

What it measures: The absolute number of AI answers that include your brand.

Example from dashboard: 354 responses mentioned Canva

How it relates to visibility:

- 354 responses mentioned ÷ 604 total responses = ~57% visibility

This raw count helps you understand volume, while visibility percentage shows coverage.

Mention Position (Rank Distribution)

What it measures: Where you appear in AI answers when mentioned.

Position	What It Means
1st rank	You're the primary recommendation
2nd rank	You're an alternative
3rd rank	You're also considered
4th+ rank	You're in the list
Not mentioned	You're invisible

Sentiment Score

What it measures: How positively AI talks about your brand.

How it's calculated:

- Positive mentions ÷ Total mentions × 100
- Example: 82 positive out of 100 total = 82% sentiment

What good looks like:

- ● Excellent: Above 85
- ● Good: 70-85
- ● Concerning: Below 60

Why it matters: Being mentioned negatively is worse than not being mentioned at all.

Market Share (Share of Voice)

What it measures: Your brand mentions compared to all competitor mentions.

How it's calculated:

- Your visibility ÷ Sum of all tracked brand visibility
- In the image above for Canva: 34.2% market share in AI responses

Citation Metrics

Total Citation Pages

- All unique URLs cited when your brand/topic is discussed
- Shows the breadth of website sources (domains) AI considers authoritative

My Pages Cited

- The number of your website/blog pages that AI references

Total Domains Cited

- Unique domains AI references for your topics

Sites Mentioning Me

- Third-party websites that talk about your brand
- Higher number = stronger authority signal to AI

Your Domain Rating

- This is a traditional SEO metric from Ahrefs
- Shows quality score of your domain (0-100)

Citation Authority Score

- Quality rating of domains citing you (0-100)
- Based on trust, relevance, and freshness of citing domains

Platform-Specific Metrics

Platform performance grid

Platform ⓘ	Visibility ⓘ	Sentiment ⓘ	Mention ⓘ	My pages cited ⓘ
Perplexity	60%	• 82	129	46
Google	58%	• 82	112	45
OpenAI	52%	• 83	113	11

Platform Visibility Breakdown

Different AI platforms will show different visibility:

- ChatGPT: 60%
- Perplexity: 45%
- Claude: 52%
- Google AI: 58%

This variance is normal - each platform has different:

- Index sources
- Ranking algorithms
- Content preferences
- Update frequencies

Metrics That Don't Matter (Yet)

Some traditional SEO metrics don't translate to AI search:

- **Keyword density** - AI understands context, not repetition
- **Meta descriptions** - AI writes its own summaries
- **Page speed scores** - Important for crawling, not for citations
- **Number of pages** - Quality over quantity in AI search

Now that you speak AI's language, let's dive into what separates keywords from prompts - and why this distinction changes everything about your content strategy.
