Core Components

The All Citations section displays a comprehensive table of individual pages from across the domain where AI models are currently citing or could potentially cite your content. Each entry represents a unique citation opportunity with detailed metrics and insights.

What this shows:

- **Which pages** (yours, competitors', third-party) are referenced
- **How often** each page appears in AI answers
- **Which topics, brands and AI platforms** are involved

Use it to measure your content's AI visibility, spot competitor wins, and uncover new content opportunities.

Why it matters:

- **Strategic Priority Setting:** Quickly identify your most valuable and frequently cited content to focus optimization efforts where they'll have maximum impact
- **Content Gap Analysis:** Discover which pages are underperforming in AI citations despite having valuable content, revealing optimization opportunities
- **Competitive Intelligence:** Understand which competitors appear alongside your citations, enabling you to refine your positioning and differentiation strategies
- **Cross-Platform Visibility:** Track your presence across multiple AI platforms from a single view, ensuring comprehensive coverage in the AI search landscape
- **Topic Authority Building:** Identify subject areas where you're gaining traction and double down on content that establishes domain expertise

How to read the metrics:

- **Higher answer counts** indicate pages with strong authority and relevance in AI responses
- **Multiple platform presence** suggests broad recognition across AI ecosystems
- **Brand co-mentions** reveal competitive landscape and partnership opportunities

1. Key controls (top bar)

Control	Why it matters
Date picker	View today's data or any past date.
Changes toggle	Compare current data to a prior period to spot trends.
Filters (Platform • Topic • Citing domain • Brand mentions)	Slice the table by AI source, query theme, site, or brand references.
Search	Jump to a specific page or keyword.
Export	Download the table (CSV) for offline analysis.

2. Table columns (left → right)

Column	Insight
Cited page	Title & URL of the referenced article—click to open.
Source type	Your brand, Competitor, or Third-party.
No. of answers	How many AI answers use this page (higher = greater AI exposure).
Brands mentioned	Logos of brands named in the page (+X for more).
Platform	Icons showing which AI engine(s) cited it.
Topic	Query category that triggered the citation (hover to see extras).

3. Fast workflows

- Audit your reach**
Filter → Source type = **Your brand** to see which of your pages appear in AI answers. Strengthen or update low-performing pages.
- Track competitors**
Filter → your competitor domains to find their most-cited pages. Study structure, depth, and backlinks.
- Find content gaps**
Filter → **Topic** where none of your pages appear but competitors/third-parties dominate—create or revamp content there.
- Leverage brand mentions**
Use **Brand mentions** filter to gauge how often your tool—or rivals—are name-dropped inside influential content.
- Compare platforms**
Switch **Platform** filter to see if Google SGE vs. ChatGPT favors different sources; tweak SEO or content accordingly.
- Monitor change over time**
Set **Changes** to *Last 7 days* (or any range) to confirm impact after a new content launch or update.

4. Tips

- **High “No. of answers” + Third-party** → consider outreach, guest posts, or partnerships to gain visibility.
- **Your page cited across multiple topics** → replicate that content format for other keywords.
- **Export regularly** to build an internal benchmark of AI citation share vs. competitors.
