How to Use the Sentiment: Platforms Tool for Platform-Level Sentiment Analysis

Overview

Core Components

How to Use This Data

Core Components

1. Best Platform

What this shows:

Identifies the AI platform where your brand receives the **highest positive sentiment** based on your tracked keywords. The platform displayed here represents your strongest performance, showing the total count of positive keywords that resonate well with that platform's responses.

Why it matters:

- Leverage strengths:** Double down on successful strategies where your brand already resonates effectively
- Resource allocation:** Focus marketing efforts on platforms showing the best reception
- Benchmark setting:** Use your top performer as a model for improving weaker platforms

2. Weakest Platform

What this shows:

Highlights the AI platform with the **highest negative sentiment** for your tracked keywords. This metric pinpoints where your brand faces the most challenging perception, displaying the count of keywords generating unfavorable responses.

Why it matters:

- Priority intervention:** Quickly identify platforms needing urgent reputation management
- Risk mitigation:** Address negative perceptions before they spread or solidify
- Growth opportunities:** Transform your biggest challenge into your next success story through targeted optimization

3. Sentiment Distribution Across Platforms

What this shows:

A stacked bar chart comparing positive (green) versus negative (red) sentiment percentages across all monitored AI platforms. Each bar represents 100% of the sentiment for that platform, making it easy to spot which platforms lean positive or negative at a glance. Platforms included typically cover ChatGPT, Google AI Mode, Perplexity, Gemini, Microsoft Copilot, and Grok.

Why it matters:

- Holistic view:** Instantly understand your sentiment landscape across the entire AI ecosystem
- Pattern recognition:** Identify whether issues are isolated to specific platforms or widespread
- Strategic planning:** Make informed decisions about where to invest optimization efforts
- Trend spotting:** Quickly identify platforms that may need attention before problems escalate

4. Keyword Sentiment Across Platforms

What this shows:

A detailed table breaking down **specific keywords** and their sentiment performance on each platform. For every AI platform monitored, you can see:

- Top positive keywords that generate favorable responses
- Top negative keywords that trigger concerning content
- Keyword counts and relevance indicators

Each platform gets its own row with green-tagged positive keywords and red-tagged negative keywords, making platform-specific patterns immediately visible.
