AI Bot(Traffic) Analytics

Writesonic GEO Looker Studio Integration

Connect your AI search visibility data to Google Looker Studio

What is the Writesonic GEO Presence Connector?

The Writesonic GEO Presence connector for Google Looker Studio lets you import your AI search visibility data directly into Looker Studio. Create custom BI dashboards and reports using your brand performance data from AI platforms like ChatGPT, Perplexity, Claude, and Gemini.

What this does for you

- Real-time data access: Connect directly to your GEO Presence project for up-to-date visibility metrics
- Custom visualizations: Create charts, graphs, and tables that match your reporting needs
- Team collaboration: Share dashboards with stakeholders and team members

Getting Started

What You Need:

- A Writesonic account with GEO Presence access
- Your Business API key
- A Google account with Looker Studio access

Step 1: Access the Connector

Copy Page

What is the Writesonic GEO Presence Connector?

What this does for you

Getting Started

What You Need:

Step 1: Access the Connector

Step 2: Authorize the Connection

Step 3: Configure Your Data Source

Step 4: Connect and Validate

Understanding Data Sources

Performance Data Sources (Require Date Range)

Content Data Sources (Require Date Range)

Configuration Data Sources (No Date Required)

1. Open [Looker Studio](#)
2. Click **Create** → **Data source**

Search for **Writesonic GEO Presence** in the connector gallery

Step 2: Authorize the Connection

1. Click **AUTHORIZE** to begin authentication

1. Sign in with your Google account if prompted
2. Grant the necessary permissions

Step 3: Configure Your Data Source

1. Enter your **API Key** from Writesonic
2. Enter your **Site URL** — this must match exactly with the Site URL shown in your GEO Presence project dashboard, makes sure it is an **EXACT** match.

Examples:

If your dashboard shows <https://example.com/>, enter <https://example.com/>
If your dashboard shows <https://example.com>, enter <https://example.com>

These are treated as different values. A mismatch will cause an error.

3. Select one or more **Data Sources**

Understanding Data Sources

The connector provides access to 10 data sources:

Performance Data Sources (Require Date Range)

Overall Website Performance — Track brand performance metrics aggregated by website, including total prompts, mentions, visibility scores, and rankings over time.

Prompt Performance — Analyze performance metrics for individual prompts, showing which queries drive the most visibility and mentions across AI platforms (ChatGPT, Claude, Gemini, etc.).

Individual AI Responses — Access complete AI-generated responses with full text, brand mentions, platform details, and competitive context.

Content Data Sources (Require Date Range)

Content Citations & Sources — Discover which websites and domains AI platforms cite as sources, including citation URLs, domains, and associated brand mentions.

Keyword Performance Metrics — Extract keywords and themes from AI responses to understand what terminology and topics are associated with your brand.

Configuration Data Sources (No Date Required)

Available Topics — Reference data of all topic categories used to organize prompts and analyze performance by topic.

Available Platforms — Reference data of AI platforms and models (ChatGPT, Claude, Gemini, etc.) being tracked.

Tracked Websites — Reference data of all websites being monitored, including your own website and competitors, with metadata like logos and website types.

Prompts Information — Reference data of all configured prompts with their topics, tags, status, and country codes.

Available Tags — Reference data of all tags used for organizing and filtering prompts.

What is a Dimension in Looker Studio?

A dimension is a categorical or descriptive field used to group, filter, or segment data. Dimensions are not aggregated; they represent attributes or categories.

Characteristics of Dimensions:

1. Used for grouping and filtering (e.g., by date, category, name)
2. Not aggregated (text, dates, IDs, categories)
3. Appear in rows, columns, or filters in charts
4. Used to break down metrics

Examples from Your Connector

- **Date** — groups data by date
- **Performance Website Name** — groups by website
- **Performance Topic Name** — groups by topic
- **Answer Platform Name** — groups by AI platform
- **Prompt Type** — segments prompts into "Branded" or "Non-Branded"
- **Config Website Is Self** — boolean filter

What is a Metric in Looker Studio?

A metric is a numeric field that can be **aggregated** (summed, averaged, counted, etc.). Metrics represent measurable values and are used to quantify performance, analyze trends, and calculate statistics.

Characteristics of Metrics:

1. Numeric values that can be aggregated (sum, average, count, min, max)
2. Used to measure performance, quantities, or calculated values
3. Appear as values in charts (Y-axis, values in tables, chart data points)
4. Can be broken down by dimensions to analyze patterns

Metrics can be aggregated in various ways

Examples from Your Connector

- **Performance Total Prompts** — count of prompts analyzed
- **Performance Total Mentions** — total number of brand mentions
- **Performance Visibility Score** — visibility percentage (0-100)
- **Performance Rank** — average ranking position
- **Performance Avg Visibility Score** — average visibility across models

Dimensions vs. Metrics: How They're Used Differently?

Dimensions

- **What they are** — Categorical or descriptive fields (text, dates, IDs, booleans)
- **Purpose** — Group, filter, and segment data
- **Where they appear** — Row/column headers, filter controls, chart axes (X-axis)
- **Example** — Performance Website Name groups data by website

Metrics

- **What they are** — Numeric fields that can be aggregated (sum, average, count, etc.)

- **Purpose** — Measure performance, quantities, or calculated values
- **Where they appear** — Values in tables, chart data points, Y-axis values, scorecards
- **Example** — Performance Total Mentions counts how many mentions occurred

How They Work Together

- Dimensions provide context and categories (e.g., "by website" or "by date")
- Metrics provide measurable outcomes (e.g., "total mentions" or "visibility score")
- **Example:** A chart using Performance Website Name (dimension) on the X-axis and Performance Total Mentions (metric) on the Y-axis shows mentions per website, enabling performance comparisons and trend analysis

Complete Dimensions Reference for the Writesonic GEO connector

About Meta Fields

Throughout the dimension tables below, you'll see some fields marked as *(meta field)*. A meta field refers to a field that contains information about the data itself, such as unique identifiers used for joining data sources or tracking timestamps.

Common Dimensions (Available in All Data Sources)

Field	Type	Description	Usage Examples
Data Source Type	Text	Identifies which endpoint the data came from	Filter to show only specific data types in mixed reports
Date	Date (YYYYMMDD)	The date for the metric data	Time-series charts, trend analysis, date comparisons
Last Refresh Time	DateTime	When the data was last fetched from the API.	
Added by Looker Studio	Monitor data freshness, troubleshoot sync issues		

Overall Website Performance Dimensions

Field	Type	Description	Usage Examples
Performance Website ID(meta field)	Text	Unique identifier for the website	Can be used to join charts with other data sources such as citation view.
Performance Website Name	Text	Brand or website name	Group metrics by brand, compare self vs competitors
Performance Website URL	URL	Full website URL	Used to view the domain and/or the full link for the website.

Prompt Performance Dimensions

Field	Type	Description	Usage Examples
Performance Prompt ID(meta field)	Text	Unique identifier for the prompt	Can be used to join with Prompts Information to view detailed information about the prompt.
Performance Prompt Text	Text	The actual AI query text	Identify which questions drive visibility
Performance Topic ID	Text	Topic category identifier	Can be used to join with Topics config data to view the specific topics
Performance Topic Name	Text	Human-readable topic name	Group analysis by topic category
Performance Prompt Tags	Text	Comma-separated list of tags	Filter by tags to see which specific prompts you'd like to see.
Prompt Type	Text	"Branded" or "Non-Branded"	Filter or group by prompt type to compare branded vs non-branded performance

Individual AI Responses Dimensions

Field	Type	Description	Usage Examples
Answer Response ID(meta field)	Text	Unique identifier for the AI response	Track individual responses
Answer Prompt	Text	The prompt that generated this response	See exact questions and answers
Answer Platform ID	Text	AI platform identifier	Join with Platform config data
Answer Platform Name	Text	Provider name (OpenAI, Anthropic, etc.)	Compare performance across providers
Answer Platform	Text	Specific model	Analyze which models mention your brand
Answer Topic ID	Text	Associated topic identifier	Can be used to group by topic in other data sources (meta field)
Answer Topic	Text	Topic name	Categorical analysis
Answer AI Response	Text	Full LLM response text	Read actual AI-generated content
Answer Brand Mentions	Text	Summary of brand mentions with ranks	Quick overview of competitive landscape

Field	Type	Description	Usage Examples
Answer Prompt Tags	Text	Tags associated with the prompt	Campaign and strategy filtering
Prompt Type	Text	"Branded" or "Non-Branded"	Filter or group by prompt type to compare branded vs non-branded

Content Citations & Sources Dimensions

Field	Type	Description	Usage Examples
Citation ID(meta field)	Text	Unique identifier for the citation	Can be used to join with Tracked Websites view to get more information on citations.
Citation Title	Text	Page title of the cited source	Identify which content gets cited
Citation URL	URL	Full URL of the citation	View the full URL of where the citation comes from.
Citation Domain	Text	Domain name of the citation	Domain-level citation view
Citation First Seen	DateTime	When citation was first detected	Timestamp for when that particular citation occurred
Citation Mentioned Websites	Text	Brands mentioned in the citation	See which brands appear together
Citation Responses	Text	Responses that used this citation	Understand citations in AI responses

Keyword Performance Metrics Dimensions

Field	Type	Description	Usage Examples
Keyword ID(meta field)	Text	Unique identifier for the keyword	Track specific keywords
Keyword	Text	The extracted keyword or phrase	Identify important keywords
Theme	Text	High-level thematic category	Thematic analysis
Sub-theme	Text	More specific sub-category	Detailed content analysis
Keyword First Seen	DateTime	When keyword was first detected	Track the first time the keywords appeared
Keyword Responses	Text	Context where keyword appeared	Understand keyword usage and the relevant context of where it appears

Configuration Dimensions

Available Topics

Field	Type	Description
Config Topic ID (meta field)	Text	Unique topic identifier
Config Topic Name	Text	Topic display name
Config Topic Created At	DateTime	Creation timestamp
Config Topic Updated At	DateTime	Last modified timestamp

Available Platforms

Field	Type	Description
Config Platform ID (meta field)	Text	Unique platform identifier
Config Platform Name	Text	Model name
Config Platform Provider	Text	Provider (OpenAI, Anthropic, etc.)
Config Platform Category ID	Text	Platform category identifier
Config Platform Category	Text	Category name

Tracked Websites

Field	Type	Description
Config Website ID (meta field)	Text	Unique website identifier
Config Website Name	Text	Brand/website name
Config Website URL	URL	Website URL
Config Website Is Competitor	Boolean	True if competitor
Config Website Is Self	Boolean	True if your own website
Config Website Logo URL	URL	Brand logo URL
Config Website Created At (meta field)	DateTime	Creation timestamp
Config Website Updated At (meta field)	DateTime	Updated timestamp

Prompts Information

Field	Type	Description
Config Prompt ID(meta field)	Text	Unique prompt identifier
Config Prompt Text	Text	Full prompt text

Tag Prompt Count	Number	Number of prompts with this tag
Tag Created At(meta field)	DateTime	Creation timestamp
Tag Updated At(meta field)	DateTime	Updated Timestamp

Complete Metrics Reference

Performance Summary Metrics

Metric	Type	Description	What Good Looks Like	Usage Examples
Performance Total Prompts	Number	Total prompts analyzed for this website	Higher is better (more coverage)	Track question volume trends
Performance Total Results	Number	Successful AI responses received	Should be close to Total Prompts	Monitor data completeness
Performance Total Mentions	Number	Times your brand was mentioned	Higher is better	Key KPI for brand visibility
Performance Visibility Score	Number (0-100)	Percentage of responses mentioning brand	60%+ is excellent, 40-60% is good	Primary success metric
Performance Rank	Number	Average position when mentioned (1=first)	Lower is better (1-3 is ideal)	Prominence in AI responses

Calculation Notes

- **Visibility Score** — $(\text{Total Mentions} / \text{Total Results}) \times 100$
- **Rank** — Averaged across all mentions (only counted when brand is mentioned)

Performance Prompts Metrics

Metric	Type	Description	What Good Looks Like	Usage Examples
Performance Total Platforms	Number	Number of AI models that responded	Higher is better	Cross-platform reach analysis
Performance Prompt Total Mentions	Number	Total mentions for this specific prompt	Varies by prompt type	Identify high-performing questions
Performance Avg Visibility Score	Number (0-100)	Average visibility across all platforms	50%+ is strong	Prompt-level success tracking
Performance Avg Rank	Number	Average rank across platforms	1-3 is excellent	Prompt prominence analysis

Performance Answers Metrics

Metric	Type	Description	What Good Looks Like	Usage Examples
Answer Brand Mention Count	Number	Number of brands mentioned in response	Depends on strategy	Competitive landscape per response
Answer Avg Rank	Number	Average rank for your brand	1-3 is excellent	Response-level prominence
Answer Avg Visibility Score	Number (0-100)	0 or 100 (mentioned or not)	100 is good	Binary mention tracking

Content Citations Metrics

Metric	Type	Description	What Good Looks Like	Usage Examples
Citation Response Count	Number	How many responses used this citation	Higher = more authoritative	Source authority ranking

Metric	Type	Description	What Good Looks Like	Usage Examples
Citation Mentioned Website Count	Number	Brands mentioned in cited content	Varies by content	Content co-mention analysis

Content Keywords Metrics

Metric	Type	Description	What Good Looks Like	Usage Examples
Keyword Response Count	Number	Times this keyword appeared in responses	Higher = more relevant theme	Theme relevance tracking

Configuration Metrics

Metric	Type	Description
Tag Prompt Count	Number	Number of prompts tagged with this tag

Metric Trends

Metric Trends is a time-series data source that returns one row per **(date x website)** across your entire tracked competitive set. Unlike *Performance Summary* (which is scoped to your own site), Metric Trends gives you the daily evolution of visibility, share of voice, citation share, mentions, and rank for **your brand and every competitor side by side**. **Date is required**. This data source is date-driven — always set a date range on the report or the data source will return an error.

When to Use It

- Tracking how your visibility or rank changes **over time**
- Comparing your brand against competitors on a **single shared metric**
- Building **stacked area / stacked bar** charts for part-to-whole metrics (Share of Voice, Citation Share)
- Competitive positioning** bubble charts ("who's where?")

Dimensions

Field	Type	Description	Usage Examples
Date	Date	Day the metrics were recorded	X-axis for all time-series charts
Trends Website ID	Text	Unique identifier for the website	Join to Config Websites / Tracked Websites
Trends Website Name	Text	Brand/website display name	Breakdown dimension to split series per brand
Trends Website URL	URL	Website URL	Link-outs and grouping

Metrics

Metric	Type	Aggregation	Description	What Good Looks Like
Trends Visibility Score	Number (0–100)	AVG	% of responses mentioning the brand on that day	Higher is better (60%+ excellent)
Trends Share of Voice	Number	AVG	Brand's share of total mentions vs. the tracked set	Higher is better
Trends Citation Share	Number	AVG	Brand's share of citations vs. the tracked set	Higher is better
Trends Mentions Count	Number	SUM	Total times the brand was mentioned	Higher is better
Trends Rank	Number	AVG	Average position when mentioned (1 = first)	Lower is better (1–3 ideal)
Trends Total Results	Number	SUM	Total AI responses analyzed that day	Context for the other metrics

Tip — inverting Rank: Because lower Rank is better, invert the axis (or use a calculated field `0 - Trends Rank`) so improvements trend upward in charts.

Creating Your First Report

Quick Start: Executive Dashboard

Let's build a dashboard that answers: "How is our AI visibility performing?"

Step 1: Create the Data Source

- 1. In Looker Studio, click **Create** → **Data source**
- 2. Search for **Writesonic GEO Presence**
- 3. Configure with your API key and Site URL
- 4. Select the **relevant data sources**
- 5. Click **CONNECT**

Step 2: Create a New Report

Click **CREATE REPORT** to open the report editor.

Step 3: Add Key Performance Scorecards (Sample)

Visibility Score Card

- Add Chart → Scorecard
- Metric: **Performance Visibility Score**
- Date Range Dimension: **Date**

Troubleshooting

Common Issues

"Invalid API Key" or "401 Unauthorized"

- Verify your API key from the Writesonic dashboard
- Ensure you're using the Business API key with GEO Presence access
- Check for extra spaces when copying the key

"Site URL Not Found" or "404 Error"

- The Site URL must match exactly with what appears in your GEO Presence dashboard — including whether or not it has a trailing slash.
For example, <https://example.com/> and <https://example.com> are treated differently.
- Ensure the site is active in your GEO Presence project.
- Check for extra spaces when copying the URL.

"No Data Available" or Empty Reports

- Check date range: Try "Last 7 days" to ensure data exists
- Remove or relax filters to test
- Verify data source selection (Config data sources don't require dates)
- Check GEO Presence dashboard for data availability

"Connection Timeout" or Slow Loading

- Reduce date range to 1-3 days
- Select fewer data sources
- Use extract data (Data → Extract data) for historical analysis
- Limit visualizations per page (6-8 max)

Data Not Refreshing

- Manual refresh: Data menu → Refresh data
- Check Last Refresh Time field to verify data age
- Wait 5-10 minutes for API cache to expire

Getting Support

Technical Support — Email: support@writesonic.com
Include: Error details, account email, site URL (not API key)

Sales/Enterprise — Email: sales@writesonic.com

Frequently Asked Questions

- Q: How often is data updated?**
A: Data is updated as new prompts are executed and AI responses collected. The connector uses caching (5-10 minutes) for performance.
- Q: Why do some prompts show 0% visibility?**
A: The brand wasn't mentioned in any AI responses for that prompt. This is valuable data for identifying content gaps.
- Q: What's the difference between "Total Mentions" and "Prompt Total Mentions"?**
A: "Total Mentions" is website-level (Summary), "Prompt Total Mentions" is prompt-level (Prompts data source).
- Q: Can I track multiple websites in one report?**
A: Yes, but each data source connects to one site URL. Create multiple data sources and blend them.
- Q: Do rank values account for competitors?**
A: Yes, rank shows position among all mentioned brands in a response.
- Q: Why are my competitor visibility scores higher?**
A: This identifies opportunities. Study their cited content and topics to inform your strategy.
- Q: Can I export raw data?**
A: Yes, use Looker Studio's export feature or query the API directly for raw JSON/CSV.
- Q: How do I calculate Share of Voice?**
A: `Your Mentions / SUM(All Website Mentions)` - create this as a calculated field.
- Q: What does "Config Website Is Self = True" mean?**
A: It identifies your own website vs. competitors in the Website configuration.
- Q: What is the "Prompt Type" dimension?**
A: Prompt Type classifies each prompt as either "Branded" (mentions your brand name directly) or "Non-Branded" (generic industry queries). It's available in Prompt Performance, Individual AI Responses, and Prompts Information data sources. Use it to compare how your brand performs when explicitly asked about vs. discovered organically.
